These include the msignage™ NS08 with Intel® Core™ 2 Duo processor which supports server-client remote control system, msignage™ WS25 with Intel® Atom™ N270 processor which has ultra-low power and slim design and NetPOP solution with SIGMA DESIGNS SMP8635 SoC architecture which supports web base log-in for remote control.

msignage™ NS08

msignage™ WS25

NetPOP

The administrator can use the wired or wireless network for remote control, and send different contents to the digital signage systems located in different locations. Through the central control of all digital signage systems, it enables the administration to be more efficient and save corporate personnel expenditure. In addition, the MSI Digital Signage offers wizard mode, which can guide users step-by-step to complete the setup easily.

About MSI IPS

MSI was founded in 1986 and is one of the world-class IT product leading brands. MSI has over-20-year experience in motherboard manufacturing and has now evolved and grown to become the world's top 3 largest motherboard manufacturers, recognized internationally for high quality and stability by consumer and enterprises. In 2006, MSI entered industrial PC market with successful and professional experience in motherboard field, and started providing reliable and customized industrial PC products with expansion capability. MSI industrial platform service (IPS) manufactures high quality industrial products in various industrial applications, such as digital signage, automation, medical electronic, ATM, point-of-sale, kiosk, industrial control, gaming and home entertainment.
